Subject: The new backup is disaster recovery

Today's systems are complex, restoring them after a failure can be even more complex. But Disaster Recovery Local has changed this, allowing us to deliver the ability to restore your entire IT infrastructure after a disaster, within the budget of any organization. The key is our ability to quickly provide complete -- and fully automated -- recovery. We do this utilizing Disaster Recovery as a Service, and leveraging key technologies such as virtualization, orchestration, and data deduplication.

Imagine being able to have your entire infrastructure fully recovered within just a few minutes? We're able to do this with the click of a single button in as little as 5 to 10 minutes.

Subject: Protect your data from prying eyes

The pace of today's business is continuously evolving and can be difficult to keep up with, but that doesn't mean that data threats aren't present. External threats to your business data can sneak in unknowingly, and unfortunately traditional backup systems only offer limited backup and recovery functionality.

<YOUR COMPANY NAME> makes sure that a separate copy of your data is available, a clean copy, from which you can recover when needed. We can keep your data safe from various forms of harm, malware, or loss -- to recover quickly, easily, and securely.

How secure is your business data? [Click here to learn more](#) <Link to landing page> and eliminate data loss with disaster recovery local capabilities.
